Re: RED ABALONE -- SHORT-TERM TOXICITY TEST

Dear Mr. Risher:

The above referenced analysis was performed on your product, SPHAG SORB. All indicators show that SPHAG SORB in its raw form is within the percentile accepted as non-toxic to the environment. The results of the analysis are listed below.

RESULT SUMMARY

The sample was found to have 98.4% of larvae with normal development. The Control Sample was found to have 98.7% normal development and the Blank had 98.8% normal development.

Again, indicators show that raw SPHAG SORB is within the acceptable percentile of being non-toxic to the environment.

Should you have any further questions, please contact our office.

Sincerely,

Tina Sagona
Customer Service Manager
